

Australian Stock Exchange Announcement

WINDIMURRA URANIUM DRILLING UNDERWAY

28 May 2007

The Manager
Companies Announcements Office
Australian Securities Exchange
20 Bridge Street SYDNEY NSW 2000

HIGHLIGHTS

- *Aircore drilling has commenced at the Windimurra Uranium Prospect.*
- *Drilling will infill historic results of up to 2.1 metres from surface at 0.43 kg/t eU₃O₈*

NARNDÉE PROJECT, WESTERN AUSTRALIA

Maximus 100%

Windimurra Uranium Prospect

Maximus has commenced a program of aircore drilling on the Windimurra palaeochannel which contains calcrete hosted uranium mineralisation previously located by wide-spaced WMC Resources drill traverses in the early 1970s (Figure 1). Calibrated radiometric probe results at that time indicated individual intervals up to 0.9 kilogram equivalent U₃O₈ per tonne and a best result of 2.1 metres from surface of 0.43 kilogram eU₃O₈ per tonne in hole MWMRC270.

The radiometrically anomalous area of plus 0.1 kilogram eU₃O₈ per tonne measures 8 kilometres by 500 metres and will be initially infilled on a 320 x 160 metre pattern of shallow aircore holes. An initial phase of about 160 holes for approximately 1600 metres will be radiometrically logged to determine the extent of more anomalous areas

Progressive infill drilling and geochemical sampling of the more anomalous areas will follow. Results from these programs is expected to provide sufficient data to allow Maximus to commission an independent estimate of an inferred mineral resource for this near surface uranium occurrence during the September Quarter.

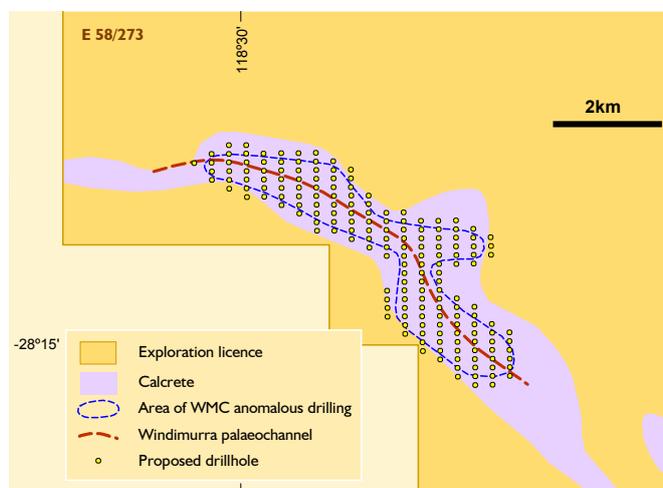

Figure 1 Location of proposed drilling in the Windimurra palaeochannel, Windimurra Project.

The information in this report that relates to Exploration Results, Mineral Resources and Ore Reserves is based on information compiled by Dr K Wills who is a Fellow of the Australasian Institute of Mining and Metallurgy and, through his company KJ Exploration Pty Ltd, acts as a geological consultant to Maximus Resources Limited. Dr Wills has more than five years relevant experience in the style of mineralisation and types of deposit under consideration and consents to inclusion of the information in this report in the form and context in which it appears. He qualifies as Competent Person as defined in the 2004 Edition of the "Australasian Code for reporting of Exploration Results, Mineral Resources and Ore Reserves".
